

Maroof Akinbayode Kadiri

Frontend Engineer | Remote (UTC +1)

maroof.kadiri@outlook.com | [LinkedIn](#) | [GitHub](#) | [Website](#)

SKILLS

Languages: TypeScript • JavaScript • Python • SQL

Frontend: React • Next.js • TanStack Start • TanStack Query • Redux & Zustand • Tailwind CSS • Web3.js

Backend & Cloud: Google Cloud Platform • Supabase • Appwrite • Sanity

AI & Automation: AI/LLM Integration • Context Engineering • n8n

DevOps & Tools: Git • GitHub • GitHub Actions

PROFESSIONAL EXPERIENCE

Senior Frontend Engineer | Boomsnap, Remote, Lagos

Sep 2025 – Present

- Owned the frontend of a high-traffic, media-heavy social platform end-to-end — UI design, integrations, and app-wide state management — keeping a large, complex codebase performant and maintainable.
- Built a resilient TanStack Query data layer with optimistic updates and rollback across feed interactions, and used React Portals to move video playback between feed and comment views without re-buffering.
- Shipped real-time features — WebSocket-based live chat and live streaming — plus a warm-buffering strategy for video media balancing smooth playback against compute cost.

Frontend Engineer | Gamebloc, Remote, Nigeria

Oct 2024 – Nov 2025

- Proposed and led the frontend rebuild of the wallet funding flow, reducing the process from 7 steps to 3 and eliminating app exits — cutting funding time by ~2 minutes per transaction.
- Implemented caching mechanisms that enhanced overall load speed by 50%, significantly improving site performance and stability.

Software Developer Intern | Huawei Technologies, Lagos, Nigeria

Nov 2023 – Feb 2024

- Identified and resolved bugs across ongoing projects through systematic testing and QA, contributing to software stability and release readiness.
- Developed and integrated a new API/service subsequently incorporated into the company's technical documentation.
- Supported the development lifecycle across multiple projects (feature testing to deployment validation) within an enterprise engineering environment.

NOTABLE PROJECTS

- [Centrium – Web3 Social Media App](#) – Full-stack blog for crypto articles on Binance Smart Chain using TypeScript and Web3.js.
- [Top Business Management System\(PWA\)](#) – Next.js + Supabase production tracking system with PostgreSQL backend, role-based access control, server-side caching, and middleware-driven route protection.
- Fraud Detection ML Model** – Multi-task Python model detecting fraudulent insurance claims and assessing policyholder risk — 95.5% accuracy, 97.75% precision using Random Forest on Kaggle automobile claims data.

EDUCATION

B.Tech. Information Systems | Federal University of Technology, Akure

CERTIFICATES & AWARDS

- BNB Hack 2024 Q4 – The Ultimate Battle of Hacker Heroes: Centrium selected as 1 of 24 projects out of 200+ entries.

LANGUAGES

English (Fluent)
